Testosterone - 256

Parameter	Result	Reference Range	Units
Testosterone (A.M.)	373.70		pg/ml
FEMALE	MALE		
20.0 - 60.0	40.0 - 130.0	PG/ML	

In men, testosterone affects sexual features and development. It is essential for normal sexual behavior, sex drive, healthy erections, and sperm production. Women rely on testosterone to maintain libido, bone density, and muscle mass throughout their lives. In both sexes, it affects many metabolic activities such as production of blood cells in bone marrow, lipid metabolism, carbohydrate metabolism, and liver function.
