CARDIOLIPIN AB (IGM)	<12		MPL	01
<p>Clinical Significance:  The Antiphospholipid Antibody Syndrome (APS) is a clinical pathologic correlation that includes a clinical event (e.g. thrombosis, pregnancy loss, thrombocytopenia) and persistent positive Antiphospholipid Antibodies (IgM or IgG ACA &gt;40 MPL/GPL, IgM or IgG anti-B2GP1 antibodies, or a Lupus Anticoagulant). The IgA isotype has been implicated in smaller studies, but have not yet been incorporated into the APS criteria. International consensus guidelines suggest waiting at least 12 weeks before retesting to confirm antibody persistence.
